

Bug Report.

1. Whoever wins the game it will display that they lost instead.

Steps: Go to the tic tac toe game page, press start, simulate a game where you win.

Plan for test: test the winner checker to see if it is displaying the proper outcome.

X lost

O	O	X
	X	
X		

2. O will only go in the top row in order and the first box of the following row, if those are taken he will skip his turn. In this picture example you can see there is a lot more X's than O's simply because the O won't go when those 4 spaces are already taken.

Steps: Go to the tic tac toe game page, start the game, now place your X's in areas so that you don't win right away and see where the O places his

Plan for test: Test the O's random picker, to see if its able to place outside those 4 squares and just isn't

Tic Tac JS

O	X	O
o	X	X
X		X

3. The O when placed in the first column of the second row is smaller than the other ones.

As you can see the O that is in the second row isn't as big as the top row O's

Steps: Navigate to the tic tac toe game, Start the game, Simulate a game where you allow the O to be in the middle row.

Plan for test: Check the O's function to see why it can also give a lowercase O

Tic Tac JS

O	X	O
o	X	X
X		X
